AF-4500 Knob Menu Setup

The following knob menu setup has worked extremely well in our RV-10. The left and right knob menus can be set from the following menu:

EFIS -> SETTINGS ->MORE -> (PAGE LIST) -> KNOB LIST

RIGHT KNOB

LEFT KNOB

These settings simplify the user interface and group the items closer to where they are on the screen. Remember that screen dimming **DIM** is always on the right knob in the checklist page. You will always have a **ZOOM** menu item when a map is displayed.

We also highly recommend setting the knob menu selection set to **TURN SEL and not PUSH SEL.** The TURN SEL setting will enable you to turn the knob to move up and down the knob list rather than pushing it multiple times.
